Responses will vary, but here is what you should see…. Adding protons changes the identity of the atom adding one moves from right to left on the Periodic Table. You can get the atom to be stable/unstable by adjusting the number of neutrons Adding electrons will change it from a +ion to neutral atom, to ion depending on how many electrons you add Adding electrons you can only add 2 to the first orbital and 8 to the second b) What particle(s) are found in the center of the atom?
