Six Degrees: Our Future on a Hotter Planet (358 pages), ISBN 978-0-00-720905-7 is a 2007 (2008 in USA) non-fiction book by author Mark Lynas about global warming. The book looks and attempts to summarize results from scientific papers on climate change .

Six Degrees: Our Future on a Hotter Planet - Wikipedia

Mark Lynas's "Six Degrees": A Summary Review Introduction. The central structuring metaphor of Six Degrees is that global warming is hell. Lynas doesn't quite put it... One Degree. In Dante's vision of Hell, the outer circle was inhabited by 'virtuous Pagans' like Plato, whose only fault... Two ...

Mark Lynas's "Six Degrees": A Summary Review - Owlcation ...

Six degrees: Our future on a Hotter Planet is a challenging and confronting read. The author [Mark Lynas] has researched current scientific peer reviewed literature and presented it in a popular science format looking at the future of our planet at various temperature levels above pre-industrial.

Six Degrees: Our Future on a Hotter Planet by Mark Lynas

There's a stunning example in British author Mark Lynas's essential new book, Our Final Warning: Six Degrees of Climate Emergency (HarperCollins-Fourth Estate, 2020). It's an update of his 2007 book Six Degrees: Our Future on a Hotter Planet, also a must-read for anyone concerned about the future of our civilization and our planet.

Mark Lynas's 'Final warning' on climate: 'It's all on us ...

In January, Mark Lynas published a little book called Carbon Counter, which told us how to measure our carbon footprints and cut back on our emissions. His second book of the year, Six Degrees, is...

Review: Six Degrees by Mark Lynas - Books | The Guardian

OUR FINAL WARNING: Six Degrees of Climate Emergency. Published 30 June 2020. Mark Lynas delivers a vital account of the future of our earth, and our civilisation, if current rates of global warming persist. And it's only looking worse. We are living in a climate emergency. But how much worse could it get? Will civilisation collapse?

Books - Mark Lynas

Mark Lynas - Speech to the Oxford Farming Conference 2018 Mark Lynas 5 January 2018 7 Comments Five years ago, almost to this very day, I stood before you and offered an apology for my earlier anti-GMO activism.

Mark Lynas - Environmental news and comment

Mark Lynas is a British author, journalist and environmental activist who focuses on climate change. He is a contributor to New Statesman, The Ecologist, Granta and Geographical magazines, and The Guardian and The Observer newspapers in the UK; he also worked on the film The Age of Stupid. He was born in Fiji, grew up in Peru and the United Kingdom and holds a degree in history and politics from the University of Edinburgh. He has published several books including Six Degrees: Our Future on a Ho

Mark Lynas - Wikipedia

Mark Lynas is a British environmentalist who has written books on climate, nuclear energy, GMOs, and how science has changed his mind. Climate change has been featured in many of his books; his latest, Our Final Warning: Six Degrees of Climate Emergency, is a new and updated edition. It outlines what lies ahead with every added degree of warming.

Six Degrees Author Mark Lynas on Our Warming World ...

six degrees summary A Summary of Conclusions from ?Six Degrees Our Life on a Hotter Planet ? by Mark Lynas In Mark Lynas ? book he outlines the effects on the planet of climate change equivalent to a global temperature rise of one, two, three, four, five and six degrees with reference to a vast library of scientific reports and study.

six degrees summary - Sustainable Woodstock

Mark Lynas has updated his book Six Degrees: Our Future on a Hotter Planet from 2008. In 12 years, the scientific evidence of warming has gone beyond earlier predictions especially in the arctic/antarctic regions. Lynas admits that he is more pessimistic than before, but raising alarms so more people will take action.

Our Final Warning: Six Degrees of Climate Emergency by ...

At five and six degrees how the world will react is impossible to say at the moment but Lynas makes this absolutely clear to the reader, explaining that this is almost uncharted territory and that his ideas are more speculative. At this level of warming he delves into past climates to find analogues in earth's history for what might happen.

Six Degrees: Our Future on a Hotter Planet: Lynas, Mark ...

The latter is a distinct possibility, as Mark Lynas's new book, Our Final Warning, makes painfully clear. Lynas is a British journalist and activist, and in 2007, in the run-up to the Copenhagen climate conference, he published a book titled Six Degrees: Our Future on a Hotter Planet. His new volume echoes that earlier work, which was by no means cheerful.

130 Degrees | by Bill McKibben | The New York Review of Books

Mark Lynas is an author, journalist and environmental campaigner, and in 2007 he wrote his first book Six Degrees: Our Future on a hotter planet. However, in 2015 we surpassed one degree of global warming and so the first chapter of his book became instantly outdated. This has led Mark Lynas t

Interview: Mark Lynas, author, Six Degrees: Our future on ...

Mark Lynas is a journalist, campaigner and author of several books on the environment, including High Tide (2004), Six Degrees (2007), The God Species (2011), Nuclear 2.0 (2013) and Seeds of Science (2018) .

Our Final Warning: Six Degrees of Climate Emergency: Lynas ...

Mark Lynas is a journalist, campaigner and author of several books on the environment, including High Tide (2004), Six Degrees (2007), The God Species (2011), Nuclear 2.0 (2013) and Seeds of Science (2018) .

In accessible journalistic prose, author Lynas distills what environmental scientists predict about the consequences of human pollution for the next hundred years, degree by degree. At 1 degree Celsius, most coral reefs and many mountain glaciers will belost. A 3-degree rise would spell the collapse of the Amazon rainforest, disappearance of Greenland's ice sheet, and the creation of deserts across the Midwestern United States and southern Africa. A 6-degree increase would eliminate most life on Earth, including much of humanity. Based on authoritative scientific articles, the latest computer models, and information about past warm events in Earth history, this promises to be an eye-opening warning that humanity will ignore at its peril.--From publisherdescription.

This book must not be ignored. It really is our final warning. Mark Lynas delivers a vital account of the future of our earth, and our civilisation, if current rates of global warming persist. And it's only looking worse.

'Mark Lynas is a saint' Sunday Times 'Fluent, persuasive and surely right.' Evening Standard Mark Lynas was one of the original GM field wreckers. Back in the 1990s - working undercover with his colleagues in the environmental movement - he would descend on trial sites of genetically modified crops at night and hack them to pieces. Two decades later, most people around the world - from New York to China - still think that 'GMO' foods are bad for their health or likely to damage the environment. But Mark has changed his mind. This book explains why. In 2013, in a world-famous recantation speech, Mark apologised for having destroyed GM crops. He spent the subsequent years touring Africa and Asia, and working with plant scientists who are using this technology to help smallholder farmers in developing countries cope better with pests, diseases and droughts. This book lifts the lid on the anti-GMO craze and shows how science was left by the wayside as a wave of public hysteria swept the world. Mark takes us back to the origins of the technology and introduces the scientific pioneers who invented it. He explains what led him to question his earlier assumptions about GM food, and talks to both sides of this fractious debate to see what still motivates worldwide opposition today. In the process he asks - and answers - the killer question: how did we all get it so wrong on GMOs? 'An important contribution to an issue with enormous potential for benefiting humanity.' Stephen Pinker 'I warmly recommend it.' Philip Pullman

A ground-breaking study of the devastating impact of global warming on people's lives around the world on every continent provides a stark and urgent warning about the dangers that exist unless something is done before it is too late to avert even greater catastrophes. Original. 25,000 first printing.

Dr James Hansen, the world's leading scientist on climate issues, speaks out for the first time with the full truth about global warming: the planet is hurtling to a climatic point of no return. Hansen - whose climate predictions have come to pass again and again, beginning in the 1980s when he first warned US Congress about global warming - is the single most credible voice on the subject worldwide. He paints a devastating but all-too-realistic picture of what will happen if we continue to follow the course we're on. But he is also a hard-headed optimist, and shows that there is still time to take the urgent, strong action needed to save humanity.

Mark Lynas delivers an alarming account of the future of our earth and our civilisation if current rates of global warming persist. We are living in a climate emergency. But how much worse could it get?

What effect are you having on the environment? If you buy Kenyan green beans what is the CO2 cost? What about your journey to work, your fridge or your clothes? The Gem Carbon Counter is your portable instant green reckoner.

We humans are the God species, both the creators and destroyers of life on this planet. As we enter a new geological era - the Anthropocene - our collective power now overwhelms and dominates the major forces of nature. But from the water cycle to the circulation of nitrogen and carbon through the entire Earth system, we are coming dangerously close to destroying the planetary life-support systems that sustain us. In this controversial new book, Royal Society Science Books Prize winner Mark Lynas shows us how we must use our new mastery over nature to save the planet from ourselves. Taking forward the work of a brilliant new group of Earth-system scientists who have mapped out our real 'planetary boundaries', Lynas draws up a radical manifesto calling for the increased use of environmentally-friendly technologies like genetic engi- neering and nuclear power as part of a global effort to use humanity's best tools to protect and nurture the biosphere. Ecological limits are real, but economic limits are not, Lynas contends. We can and must feed a richer population of nine billion people in decades to come, whilst also respecting the nine planetary boundaries - from biodiversity to ocean acidification - now identified and quantified by scientists. Ripping up years of environmental orthodoxy, he reveals how the prescriptions of the current green movement are likely to hin- der as much as help our vitally-needed effort to use science and technology to play God and save the planet.

A member of the Inter-governmental Panel on Climate Change examines the fossil-fuel industry's public relations campaign to discredit the science of climate change and deny the reality of global warming.

Respected, authoritative, award-winning author Chris Goodall tackles global warming reversal in this engaging and balanced book. Ten Technologies to Save the Planet -- popular science writing at its most crucial -- is arguably the most readable and comprehensive overview of large-scale solutions to climate change available. Goodall profiles ten technologies with the potential to slash global greenhouse emissions, explaining how they work and telling the stories of the inventors, scientists, and entrepreneurs who are driving them forward. Some of Goodall's selections, such as the electric car, are familiar. Others, like algae and charcoal, are more surprising. Illustrated with black-and-white photos and simple charts, Ten Technologies to Save the Planet combines cutting-edge analysis with straightforward explanations about pros and cons, and debunks myths along the way.
