In all ultrasound-guided paravertebral block techniques, an indication of correct needle tip placement is the anterior displacement of the parietal pleura when the solution of local anaesthetic is being injected. Hydrolocation with saline can be used to help with needle tip position; this is particularly useful when the anatomy on

It can be performed at the Cervical, Thoracic or Lumbar level; however only the Thoracic Paravertebral block will be discussed here. Thoracic paravertebral block confers several advantages over epidural block: Comparable pain relief with reduced side effects. Better pulmonary function and fewer pulmonary complications; Contraindications to thoracic epidural block do not preclude thoracic paravertebral block e.g. systemic sepsis, deranged coagulation; Indications

Thoracic Paravertebral Block. Thoracic paravertebral block is the technique by which local anaesthetic is injected in wedge shaped paravertebral space alongside of the vertebral body called the thoracic paravertebral space (TPVS). This provides unilateral somatic and sympathetic blockade at selective segmental regions.

In this technique, a transverse scan of the thoracic paravertebral region at the desired level is performed as described above, and the block needle is inserted in the short axis of the ultrasound beam (Fig. 9.14). During the scout scan, the depth to the transverse process and pleura is determined.

With the use of ultrasonography in peripheral nerve blocks, paravertebral block can now be performed by direct observation through ultrasound. Ultrasound-guided paravertebral block practices have been reported in children (1, 2). We aimed to share our first experience in ultrasound-guided paravertebral block application.

Recently, there has been remarkable changes in the concept of thoracic paravertebral block (TPVB), and several indirect TPVB approaches have been described 1; erector spinae plane block (ESPB) is a representative indirect TPVB method, reported by Forero et al 2 in 2016. Most indirect TPVBs, including ESPB, are interfascial plane blocks.
